Preliminary Investigation Report

Organization Details:

Organization Name: PrintSari Corner

Industry Type: Retail & Print Services

Organization Address: Purok 5 RVM, Poblacion, Magpet, North Cotabato

Organization's Contact/Representative:

Contact Person: Dennis A. Lupase

Phone Number: 09124372005

Email: dennislupase@gmail.com

Organizational Chart/Structure:

Owners: Dennis A. Lupase, Charita Lupase

Worker: Zimon Catipay

Worker: Desiree Jane Lupase

Worker: Monique Anguit

Stock Person/Supplier: Ellaine Lupase

Organization's Brief History:

PrintSari Corner was started in 2023 by my family because of the good business location in front of the municipal hall. I saw that many people come to this area every day for government transactions, and I thought this would be a good place to start a business. I noticed that people always needed to photocopy their documents like birth certificates and IDs when they apply for senior citizen cards or other government requirements. Since our shop is the nearest printing service to the municipal hall, customers naturally come to us for their xerox and printing needs.

The location also has a gymnasium nearby where basketball leagues, festivals, and concerts happen regularly. During these events, many people need snacks and drinks, and we are the closest store they can buy from. This made me realize we could serve both printing services and sell food items to the community.

When the business started growing, two of my siblings wanted to help by investing money in the business. They also help with operations whenever needed. My mother also wanted to be part of the business, so she became a co-owner as well.

Now, my mother and I check on the business every week to make sure everything is running well. We look at the sales, check if we have enough supplies, and see if our customers are happy with our services.

The business works well because of our location. We serve people who need government document services and people who want to buy snacks and drinks during community events. This makes PrintSari Corner an important part of the community.

Business Process:

Customer Purchase Process (Sari-Sari Store):

The customer selects snacks, drinks, or other items from the store shelves. The cashier manually checks the item price and calculates the total amount using a calculator or mental math. The customer pays cash, and the cashier gives change if needed. The cashier writes down what was sold on a bond paper list. No receipt is given to the customer.

Objects: Customer, Items, Cashier, Bond Paper, Calculator, Cash

Actions: selects, checks, calculates, pays, writes down

Printing Service Process:

The customer requests printing services (xerox, colored printing, lamination). The printing clerk asks for specifications like paper size, number of copies, and type of service. The printing clerk manually calculates the total cost based on memorized prices. The customer pays, and the printing job is completed. The cashier writes the service details and payment on bond paper.

Objects: Customer, Documents, Cashier, Printer, Lamination Machine, Bond Paper

Actions: requests, asks, calculates, pays, completes, writes

End-of-Day Process:

At closing time, the owner counts all cash in the container. The owner reads through the handwritten bond paper to see what items were sold during the day. The owner tries to estimate remaining stock by physically counting items on shelves. No proper record of daily sales, expenses, or profit is maintained.

Objects: Owner, Cash Container, Bond Paper, Items, Shelves

Actions: counts, reads, estimates, physical counting

Identified Problems:

1. **No Sales Tracking System:** Everything is written manually on bond paper, making it difficult to track daily, weekly, or monthly sales accurately.
2. **Inventory Management Issues:** The owner has no clear record of how many items are left in stock, leading to unexpected stockouts or overstocking.
3. **Manual Calculation Errors:** All pricing and change calculations are done manually, increasing the risk of human errors and potential revenue loss.
4. **Financial Record Keeping Problems:** At the end of each day, consolidating handwritten notes with actual cash is time-consuming and often inaccurate, making it hard to determine actual profit or loss.
5. **Mixed Business Tracking:** It's difficult to determine which part of the business (sari-sari store vs printing services) is more profitable since all sales are recorded together on the same bond paper.

Events Table

Product Management

Event	Trigger	Source	Use Case	Response	Destination
View Store Products	Owner clicks "View Products"	Owner	View Product Catalog	Display all products with categories, prices, and stock info	Product Interface
Add New Product	Owner clicks "Add Product"	Owner	Manage Store Products	New product record created with productID, name, category, type, purchase/selling price	Product Table
Update Product Details	Owner modifies product information	Owner	Manage Store Products	Product name, category, type, purchase price, selling price, profit margin updated	Product Table
Remove Product	Owner clicks "Delete Product"	Owner	Manage Store Products	Product marked as inactive or removed from catalog	Product Table

Service Management

Event	Trigger	Source	Use Case	Response	Destination
View Services	Owner clicks "View Services"	Owner	View Service Catalog	Display all services with associated service types	Service Interface
Add New Service	Owner clicks "Add Service"	Owner	Manage Printing Services	New service record created with serviceID and serviceName	Service Table

View Service Types	Owner views service configuration	Owner	View Service Types	Display service types with paper size, color mode, and associated supplies	Service Type Interface
Add Service Type	Owner clicks "Add Service Type"	Owner	Manage Service Types	New service type created linking service, supply, machine with specifications	Service_Type Table
Update Service Type Cost	Owner modifies cost components	Owner	Manage Service Pricing	Update supply cost, ink cost, electricity cost, labor cost, total cost, selling price	Service_Type_Cost Table
Assign Machine to Service	Owner links machine to service	Owner	Manage Machines	Machine assigned to service with active status	Machine Table

Service Supply Management

Event	Trigger	Source	Use Case	Response	Destination
View Service Supplies	Owner clicks "View Supplies"	Owner	View Supply Inventory	Display all printing supplies with type, paper size, purchase price	Service Supply Interface
Add New Supply	Owner clicks "Add Supply"	Owner	Manage Printing Inventory	New supply record created with serviceSupplyID, name, type, paper size, purchase price	Service_Supply Table

Update Supply Details	Owner modifies supply information	Owner	Manage Printing Inventory	Supply name, type, paper size, purchase price updated	Service_Supply Table
-----------------------	-----------------------------------	-------	---------------------------	---	----------------------

Sales Transactions

Event	Trigger	Source	Use Case	Response	Destination
Create New Transaction	Cashier clicks "New Transaction"	Cashier	Process Customer Transaction	New transaction record created with transactionID, userID, customerID, timestamp	Transaction Table
Add Product to Transaction	Cashier scans/selects product	Cashier	Process Customer Transaction	Transaction item created with productID, purchase/selling price, quantity, subtotal, profit	Transaction_Item Table
Add Service to Transaction	Cashier selects service type	Cashier	Process Customer Transaction	Transaction item created with serviceID, serviceTypeID, cost details, selling price, quantity, subtotal, profit	Transaction_Item Table
Calculate Transaction Total	Cashier finalizes items	System	Calculate Transaction Totals	Total amount computed from all transaction	Transaction Table

				items, total profit calculated	
Process Payment	Cashier enters cash received	Cashier	Process Customer Transaction	Cash received and change calculated and recorded	Transaction Table
Complete Transaction	Transaction finalized	System	Record Transaction	Transaction saved with complete details, timestamp recorded	Transaction Table
Generate Receipt	Customer requests receipt	Cashier	Generate Customer Receipt	Receipt generated with transaction details, items, prices, totals	Customer
Auto-Deduct Inventory	Transaction completed	System	Auto-Update Inventory	Stock_Out record created for each item, quantities reduced in Inventory_Item	Stock_Out Table, Inventory_Item Table

Product Inventory Management

Event	Trigger	Source	Use Case	Response	Destination
Product Stock In	Owner receives new stock	Owner	Update Store Inventory	Stock_In record created with productID, userID, quantity, purchase	Stock_In Table

				price, expiry date, stockInDate	
Link Stock to Expense	Owner records purchase expense	Owner	Track Business Expenses	Stock_In linked to expense record via expenseID	Stock_In Table
Create Inventory Item	Stock In processed	System	Update Inventory Items	Inventory_Item created/updated with productID, stockInID, current quantity, expiry date	Inventory_Item Table
View Product Inventory	Owner/Cashier views stock	Owner/Cashier	View Current Inventory	Display all inventory items with current quantities, expiry dates per product	Inventory Interface
Adjust Product Quantity	Owner manually adjusts stock	Owner	Update Store Inventory	Stock_In or Stock_Out record created for adjustment, Inventory_Item quantity updated	Stock_In/Out Table, Inventory_Item
Track Product Expiry	System checks expiry dates	System	Monitor Product Expiration	Alert generated for products approaching expiry date	User Interface

Service Supply Inventory Management

Event	Trigger	Source	Use Case	Response	Destination
Service Supply Stock In	Owner receives supplies	Owner	Update Printing Inventory	Stock_In record created with serviceSupplyID , userID, quantity, purchase price, stockInDate	Stock_In Table
Link Service Supply to Expense	Owner records purchase expense	Owner	Track Business Expenses	Stock_In linked to expense record via expenseID	Stock_In Table
Create Service Supply Inventory Item	Stock In processed	System	Update Inventory Items	Inventory_Item created/updated with serviceSupplyID , stockInID, current quantity	Inventory_Item Table
View Service Supply Inventory	Owner/Cashier views supplies	Owner/Cashier	View Current Inventory	Display all supply inventory items with current quantities	Inventory Interface
Adjust Service Supply Quantity	Owner manually adjusts supplies	Owner	Update Printing Inventory	Stock_In or Stock_Out record created for adjustment, Inventory_Item quantity updated	Stock_In/Out Table, Inventory_Item
Deduct Service Supply on Service	Service transaction completed	System	Auto-Deduct Inventory	Stock_Out record created with serviceSupplyID , transactionItemID, quantity	Stock_Out Table

				removed, stockOutType	
--	--	--	--	--------------------------	--

Financial Reporting

Event	Trigger	Source	Use Case	Response	Destination
Generate Daily Report	System runs end-of-day	System	Generate Daily Reports	Daily_Sales_Report created with date, total revenue, expenses, profit, net profit, transaction count	Daily_Sales_Report Table
Generate Daily Transactions	System aggregates transactions	System	Track Daily Performance	Daily_Transaction records created linking to dailySalesReportID with transaction details, revenue, profit	Daily_Transaction Table
View Daily Report	Owner selects "Daily" tab	Owner	Display Daily Reports	Display daily report with revenue breakdown, expenses, profit analysis	Owner Interface
Generate Monthly Report	System runs end-of-month	System	Generate Monthly Reports	Monthly_Report created aggregating daily reports with month/year, totals, averages	Monthly_Report Table
View Monthly Report	Owner selects	Owner	Display Monthly Reports	Display monthly performance with revenue,	Owner Interface

	"Monthly" tab			profit, expenses, averages	
Generate Yearly Report	System runs end-of-year	System	Generate Yearly Reports	Yearly_Report created aggregating monthly data with best/worst months, annual totals	Yearly_Report Table
View Yearly Report	Owner selects "Yearly" tab	Owner	Display Yearly Reports	Display annual performance with monthly comparisons, trends	Owner Interface
Export Report	Owner clicks export button	Owner	Generate Report File	PDF/Excel file generated from selected report data	Owner Device

Expense Management

Event	Trigger	Source	Use Case	Response	Destination
Record Business Expense	Owner enters expense data	Owner	Track Business Expenses	Expense record created with expenseID, userID, category, description, amount, date	Expense Table
Link Expense to Stock In	Owner records inventory purchase	Owner	Record Purchase Expense	Expense linked to Stock_In record for inventory cost tracking	Expense Table, Stock_In Table
View Expense History	Owner views expenses	Owner	View Expense Records	Display all expenses by category, date, amount	Expense Interface

Categorize Expense	Owner assigns expense category	Owner	Track Business Expenses	Expense category assigned (utilities, supplies, maintenance, etc.)	Expense Table
--------------------	--------------------------------	-------	-------------------------	--	---------------

User Management

Event	Trigger	Source	Use Case	Response	Destination
Create User Account	Owner adds new user	Owner	Manage User Accounts	User record created with userID, username, password, personal info, role, addressID, isActive status	User Table
Assign User Role	Owner sets user role	Owner	Manage User Permissions	User role assigned (Owner/Cashier) determining access level	User Table
Add User Address	Owner enters address info	Owner	Manage User Accounts	Address record created and linked to user via addressID	Address Table, User Table
Update User Information	Owner modifies user details	Owner	Manage User Accounts	User credentials, personal info, contact details, profile picture updated	User Table
Deactivate User Account	Owner removes user	Owner	Manage User Accounts	User isActive status set to false, account access revoked	User Table
View User Accounts	Owner views user list	Owner	View User Accounts	Display all users with roles, status, creation info	User Interface

User Login	User enters credentials	User	Authenticate User	Login_History record created with loginID, userID, username, loginTime	Login_History Table
User Logout	User clicks logout	User	End User Session	Login_History record updated with logOutTime	Login_History Table
Track Login History	System logs user sessions	System	Monitor User Activity	All login/logout events recorded with timestamps	Login_History Table

Use Case List

Sales Transaction System

A unified transaction system that processes both sari-sari store items and printing services in a single integrated interface. The system handles combined purchases where customers can buy store products and request printing services simultaneously. Each transaction is linked to a customer record and tracks detailed item information including purchase prices, selling prices, and profit margins. The system automatically updates inventory through Stock_Out records upon transaction completion.

Use Cases:

- **Process Customer Transaction:** Handle combined purchases of store items and/or printing services, creating transaction records with customer linkage
- **Add Product to Transaction:** Add product items to transaction with quantity, purchase price, selling price, subtotal, and profit calculation
- **Add Service to Transaction:** Add printing service types to transaction with cost breakdown (supply cost, ink cost, electricity cost, labor cost) and selling price
- **Calculate Transaction Totals:** Automatically compute total amount from all transaction items and calculate total profit
- **Process Payment:** Record cash received and calculate change for customer
- **Generate Customer Receipt:** Create and print optional receipt with complete transaction details including itemized list

- **Track Transaction Items:** Record individual items in Transaction_Item table with detailed pricing and profit information
- **Auto-Deduct Inventory:** Automatically create Stock_Out records and reduce inventory quantities when transaction is completed

Dual Inventory Management System

A comprehensive real-time inventory tracking system that monitors stock levels for both sari-sari store products and printing supplies through Inventory_Item records. The system tracks stock movements via Stock_In and Stock_Out records, linking purchases to expense records for accurate cost tracking. Inventory items maintain current quantities and expiry dates, with automatic deductions triggered by sales transactions. The owner manages stock additions and adjustments, while cashiers have view-only access to monitor current levels.

Use Cases:

- **Record Product Stock In:** Create Stock_In records when receiving new product inventory with quantity, purchase price, expiry date, and link to expense
- **Record Supply Stock In:** Create Stock_In records when receiving printing supplies with quantity and purchase price
- **Create Inventory Items:** Generate or update Inventory_Item records linking to Stock_In with current quantities and expiry tracking
- **View Current Inventory:** Display real-time stock levels for all products and supplies from Inventory_Item table (Owner and Cashier)

- **Adjust Product Quantity:** Manually create Stock_In or Stock_Out records for inventory adjustments (Owner only)
- **Adjust Supply Quantity:** Manually adjust printing supply quantities through Stock_In/Out records (Owner only)
- **Monitor Product Expiration:** Track expiry dates in Inventory_Item and generate alerts for perishable products
- **Track Stock Movements:** View complete history of Stock_In and Stock_Out records with dates, quantities, and reasons
- **Auto-Deduct on Sale:** Automatically create Stock_Out records linked to transactions when items are sold
- **Link Purchases to Expenses:** Connect Stock_In records to Expense records for financial tracking

Financial Report

An automated financial tracking and reporting system that computes business performance through a hierarchical reporting structure. The system generates Daily_Sales_Report aggregating Daily_Transaction records, which roll up into Monthly_Report and Yearly_Report. Each level tracks revenue from both store and printing segments, expenses, transaction profit, and net profit after expenses. The system links business expenses to stock purchases and operational costs. Reports include transaction counts, averages, and identify best/worst performing periods. Accessible only to the owner for business analysis and decision-making.

Use Cases:

- **Generate Daily Reports:** Create Daily_Sales_Report with aggregated revenue, expenses, profit, net profit, and transaction count
- **Record Daily Transactions:** Generate Daily_Transaction records for each sale with revenue and profit breakdown
- **Generate Monthly Reports:** Produce Monthly_Report aggregating daily reports with month/year totals, averages, and transaction counts
- **Generate Yearly Reports:** Create Yearly_Report aggregating monthly data with annual totals, best/worst months, and monthly averages
- **View Daily Performance:** Display daily sales summaries with revenue and expense breakdown by date
- **View Monthly Performance:** Show monthly business performance comparing store and printing revenues across months
- **View Yearly Performance:** Display annual business reports with monthly comparisons and trend analysis
- **Export Reports:** Generate PDF/Excel files from Daily, Monthly, or Yearly reports for external use
- **Record Business Expenses:** Enter and track business costs with category, description, amount, and date
- **Link Expenses to Purchases:** Connect expense records to Stock_In records for inventory cost tracking
- **Calculate Net Profit:** Compute net profit by subtracting total expenses from transaction profit

- **Track Expense Categories:** Categorize expenses (utilities, supplies, maintenance, etc.) for detailed analysis

Product and Service Management System

A comprehensive management system for maintaining product catalog and service offerings. The Product module handles store items with categories, types, purchase prices, selling prices, and profit margins. The Service module manages printing services through a three-tier structure: Service (base service), Service_Type (specific variants with paper size and color mode linked to Service_Supply and Machine), and Service_Type_Cost (detailed cost breakdown including supply cost, ink cost, electricity cost, labor cost, total cost, and selling price). Changes reflect immediately in the POS system for transaction processing.

Use Cases:

- **Manage Store Products:** Add, update, or remove products with category, type, purchase price, selling price, and profit calculation
- **View Product Catalog:** Display all products with detailed information and current inventory status
- **Manage Services:** Create and configure base printing services (xerox, printing, lamination)
- **Manage Service Types:** Define service variants linking Service, Service_Supply, Machine with specifications (paper size, color mode)

- **Manage Service Type Costs:** Configure detailed cost components (supply, ink, electricity, labor) and set selling prices
- **Update Product Pricing:** Modify product purchase prices and selling prices with automatic profit recalculation
- **Update Service Rates:** Adjust service type costs and selling prices with last updated timestamp
- **Configure Service Supplies:** Add and manage printing supplies (paper types, toner, lamination film) with purchase prices
- **Assign Machines to Services:** Link machines to services and manage active/inactive status
- **Track Service Profitability:** Calculate service profit margins from cost breakdown and selling prices

User Management System

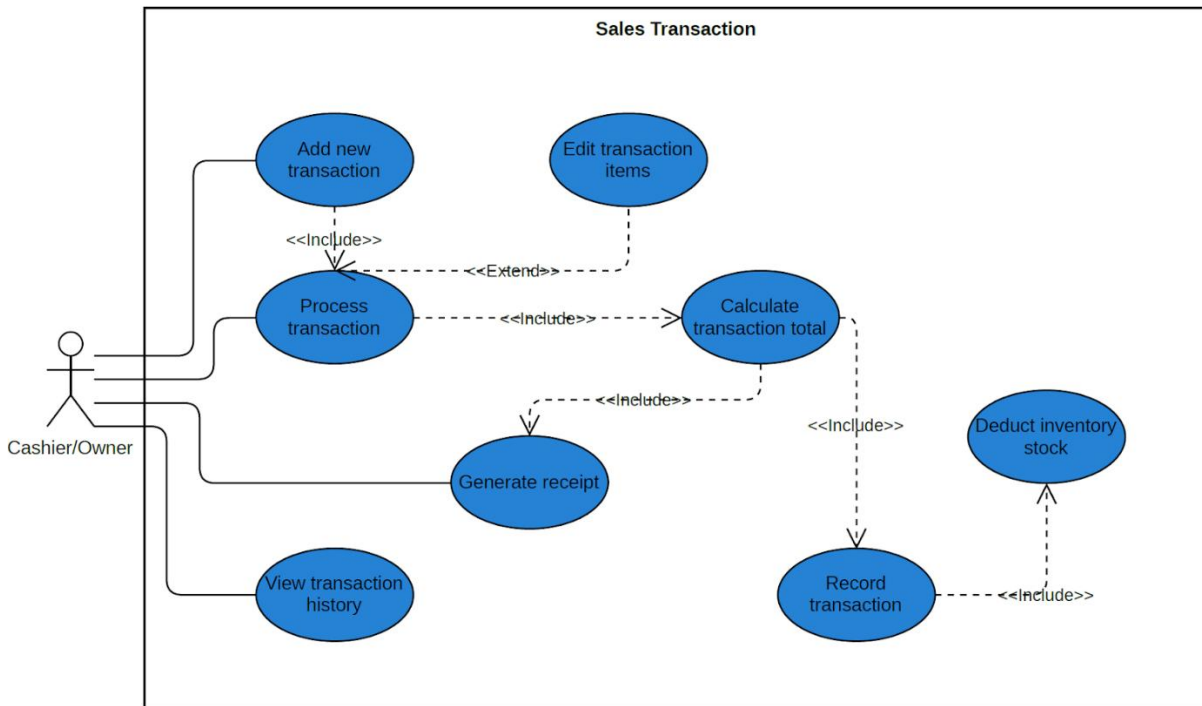

A role-based access control system that manages user authentication, permissions, and activity tracking. The system supports two user roles: Owner (full access to all features) and Cashier (restricted access to POS and view-only inventory). User records include comprehensive personal information, contact details, address linkage through Address table, profile pictures, and account status (isActive). The Login_History table tracks all user sessions with login and logout timestamps. Upon login, the system displays interface elements appropriate to the user's role and records the session. Users are linked to their actions throughout the system via userID foreign keys.

Use Cases:

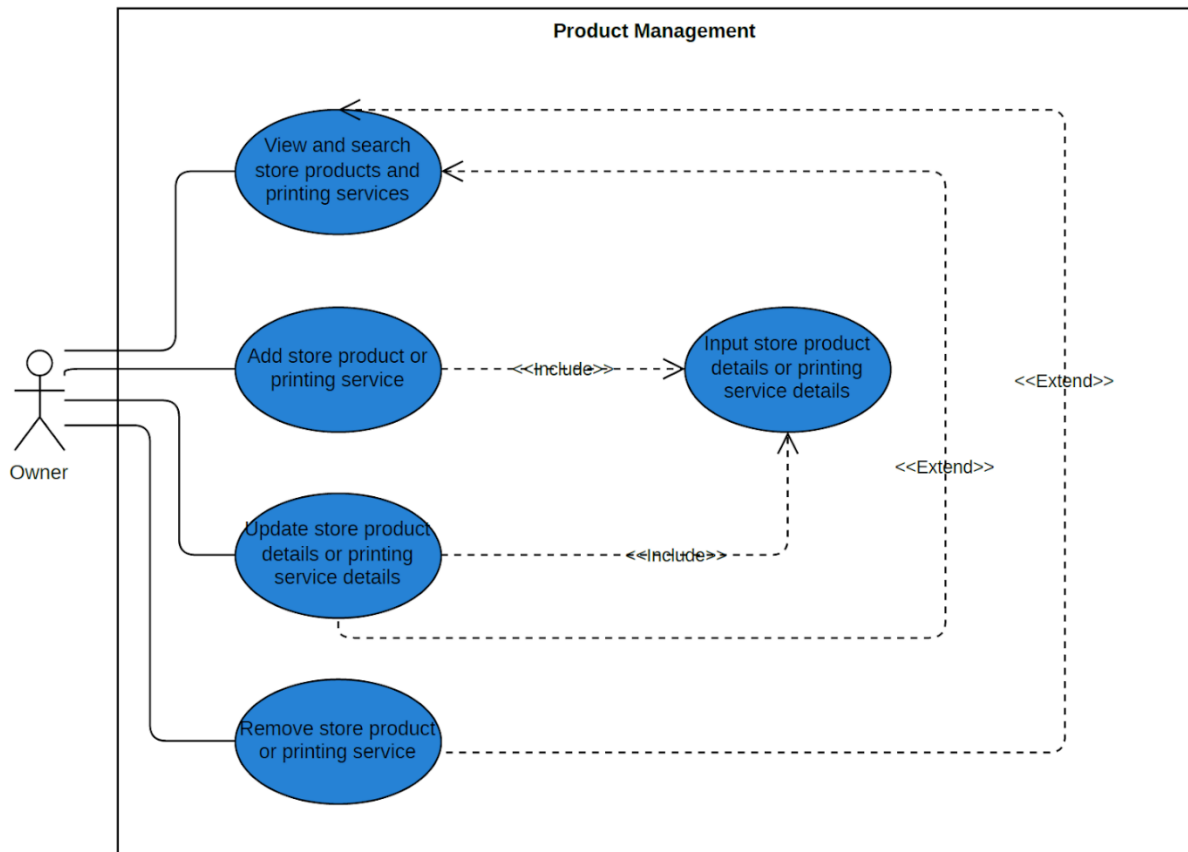

- **Create User Account:** Add new user with username, password, personal info, role assignment, and address details
- **Assign User Role:** Set role-based access levels (Owner vs. Cashier) determining system permissions
- **Manage User Address:** Create and link Address records to users with complete location details
- **Update User Information:** Modify user credentials, personal details, contact info, and profile picture
- **Activate/Deactivate User:** Set user isActive status to enable or disable account access
- **View User Accounts:** Display all system users with roles, status, creation info, and contact details
- **Authenticate User:** Validate login credentials and create Login_History record with login timestamp
- **Track User Sessions:** Record all login and logout events with timestamps in Login_History table
- **End User Session:** Process logout and update Login_History with logout timestamp
- **Track User Actions:** Link user activities (transactions, stock movements, expense records) to userID
- **View Login History:** Display user session history with login/logout times for activity monitoring

Use Case Description

3.1 Sales Transaction

Field	Description
Use Case Name	Process Sales Transaction
Scenario	Cashier records the customer's order and processes the payment
Triggering Event	Cashier inputs orders in the POS
Brief Description	Cashier lists ordered products/services in the POS. The system computes the total and records the transaction.
Actors	Cashier, Customer
Related Use Case	Product Inventory Management, Service Supply Inventory Management
Preconditions	Products and services must exist in the system
Postconditions	Transaction details are saved; inventory is updated
Flow of Activities	Actor: 1. Cashier lists orders in the POS. 2. Confirms order and enters payment. System: 1.1 System checks stock availability. 1.2 The system computes the total and records the payment. 1.3 System updates the inventory and saves the transaction.
Exception Conditions	If the stock is unavailable, the system notifies the cashier to remove or replace the item.

3.2 Product and Service Management

Field	Description
Use Case Name	Manage Products and Services
Scenario	Owner updates product or service details
Triggering Event	Owner edits data in the management panel
Brief Description	The owner can add, update, or remove product and service records

Actors	Owner
Related Use Case	Product Inventory Management, Service Supply Management
Preconditions	The system must contain product and service tables
Postconditions	Product and service lists are updated
Flow of Activities	Actor: 1. Owner selects product/service to edit. 2. Owner saves changes. System: 1.1 Updates the database record. 1.2 Displays confirmation.
Exception Conditions	If a duplicate product/service name is detected, the system prompts an error.

3.3 User Management

Field	Description
Use Case Name	Manage User Accounts
Scenario	The owner adds or modifies user access
Triggering Event	The owner creates or updates the user record
Brief Description	The owner can add, edit, or deactivate user accounts
Actors	Owner
Related Use Case	Login History
Preconditions	User table exists
Postconditions	User information and access are updated
Flow of Activities	Actor: 1. Owner inputs user details. 2. Saves the user record. System: 1.1 System validates input. 1.2 Saves data to the database. 1.3 Confirms update.

Exception Conditions	If the username already exists, the system prompts an error.
-----------------------------	--

3.4 Financial Reporting

Field	Description
Use Case Name	Generate Financial Report
Scenario	The owner generates sales and expense reports
Triggering Event	The owner selects the report option
Brief Description	System compiles data and generates a summary report
Actors	Owner
Related Use Case	Sales Transaction, Expense Management
Preconditions	Transaction and expense data must exist
Postconditions	The report is generated and stored
Flow of Activities	Actor: 1. Owner chooses date range. 2. Requests report generation. System: 1.1 Collects relevant data. 1.2 Calculates totals and profit. 1.3 Displays or exports the report.
Exception Conditions	If no data is found, the system displays "No Records Found."

3.5 Service Supply Inventory Management

Field	Description
Use Case Name	Manage Service Supply Stock
Scenario	Owner records new or used supplies
Triggering Event	Owner inputs stock changes
Brief Description	System tracks service supply stock in/out

Actors	Owner
Related Use Case	Service Supply Management
Preconditions	Service supply items exist in the system
Postconditions	Stock levels updated
Flow of Activities	Actor: 1. Owner inputs supply data. 2. Submits stock update. System: 1.1 Updates stock quantity. 1.2 Logs stock transaction.
Exception Conditions	If a negative quantity is entered, the system displays an error.

3.6 Product Inventory Management

Field	Description
Use Case Name	Manage Product Inventory
Scenario	Owner updates product stock
Triggering Event	The owner records stock in or out
Brief Description	Tracks product stock movement and availability
Actors	Owner
Related Use Case	Sales Transaction
Preconditions	Product records exist
Postconditions	Inventory count updated
Flow of Activities	Actor: 1. Owner inputs stock details. 2. Confirms changes. System: 1.1 Updates stock level. 1.2 Saves transaction record.
Exception Conditions	If invalid data is entered, the system prompts the user to correct it.

3.7 Service Supply Management

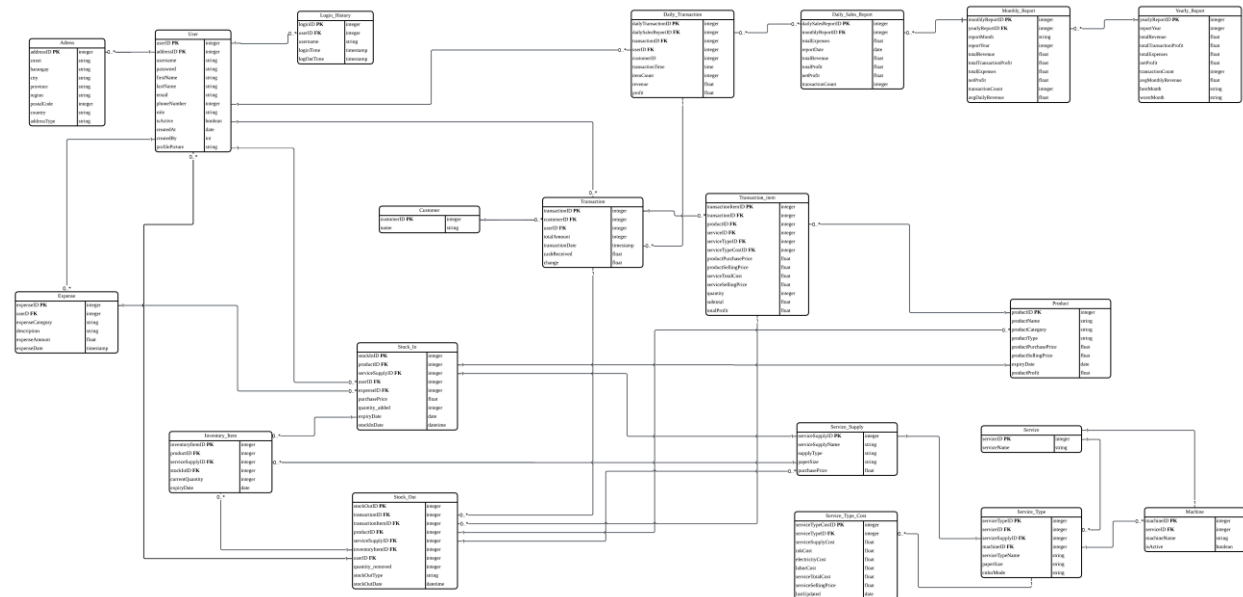

Field	Description
Use Case Name	Manage Service Supplies
Scenario	Owner adds or updates supply info
Triggering Event	Owner updates supply details
Brief Description	Manages list of supplies used in services
Actors	Owner
Related Use Case	Service Supply Inventory Management
Preconditions	Supply table exists
Postconditions	Supply info updated
Flow of Activities	Actor: 1. Owner selects supply. 2. Edits and saves details. System: 1.1 Updates record. 1.2 Confirms change.
Exception Conditions	If a duplicate name is found, the system prompts the user.

3.8 Expense Management

Field	Description
Use Case Name	Manage Expenses
Scenario	Owner records expenses
Triggering Event	Owner inputs expense data
Brief Description	Records and tracks business expenses
Actors	Owner
Related Use Case	Financial Reporting
Preconditions	The expense table must exist
Postconditions	Expense recorded

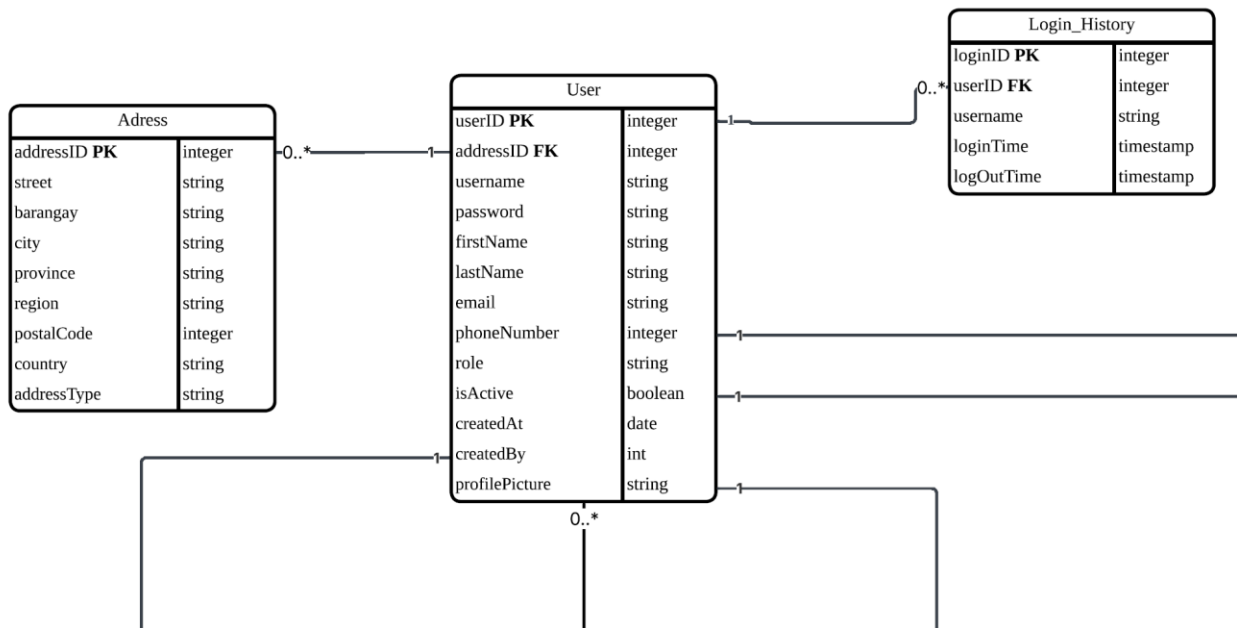

Flow of Activities	Actor: 1. Owner enters expense info. 2. Saves record. System: 1.1 Validates and saves data. 1.2 Confirms success.
Exception Conditions	If the amount is blank or invalid, the system shows an error.
